

Role of E-Governance in Public Administration

*Prof. Samadhan S.Amle ** Dr. Dinkar S. Kalambe

In the world there were lot of revolutionary activities were happened in various fields among them the revolution in the science and technology has lot of importance. Due the revolutions occurred in the present field specially the invention of computer. Then and then only the communication between two objects have become speedily. It decreases the geographical distance between the two objects. Due to computer, the new concepts E-governance come into existence. In day-to-day life the concept that is E-governance is using by every and each government.

It was to find that America was the first country to use E-governance because to create modernness, faultless and simplicity in administration. It become prominent thing in the conference of G-7 which was held in 1995. The concept of E - governance has given lot of importance in the meeting at Singapore held in 2003. Developed and underdeveloped country used this concept E-governance in communication for service and information of govt. to the citizens. In every field of science and technology we used the present concept that is E-governance.

E-governance mean - In E-governance E means Electronics The meaning of E-governance is the use of Electronic instruments E-governance is the application of ICT to improve the efficiency and accountability of government, whereas, e governance depends on the use of ICT by mobilizing government resources and utilizing the internal information sources by the government employees with the help of citizens, acceptability to the changes taking place to provide better service to them. E-governance can also be defined as the application of electronic means in the -

Interaction between government and citizen and government and businesses. Internal government operations to simply and improve democratic, government and business aspects of the governance. Definition of E-governance- Government (short for electronic government), also known as e-gov. digital government, online government or transformation gov-

ernment) is a diffused neologism used to refer to the use of information and communication technology to provide and improve government services, transaction and interaction with citizen, businesses and other arms of government.

Smart governance, online governance good governance are used for E-governance. According to Shri. Joshi. "E-governance means the method of working become developed in the use of information and technology "

Aims of E-governance-

To create Transparency and effectiveness in the working of govt. To develop governmental work & its method of working. To specify the responsibility of govt. To increase the participation of the people in administrative work To enhance the relationship between the govt. and citizens. To decrease the corruption and disability in the govt. To circulate the governmental information and services. To facilitate all services anywhere and anytime. To make the govt. modern as well as speedy.

The Principles of E-governance-The working of E-governance, illustrate the Principles of E-governance as stated below.

1. Simplicity - It has simple in itself. 2. Morality - The should be morality in E-governance 3. Accountability - Accountability is to be illustrated in E-governance 4. Responsibility - quick answer or information get in the E-governance 5. Transparency - There is Transparency in the working of E-governance

E-governance stated as smart governance because of the Principles as stated above Inability - There is perfection of working as well as information in E-governance. Effectivity- There is too much effectiveness in the working of E-governance

Excellency- In accordance with the working E-governance is the best of all Efficiency -E-governance is too much efficient in working. Units of E-governance Information technology's units are important to establish the E-governance. In it the role of

**Principal, Moreshware Arts, Science & Commerce College Bhokardan.

Electronic unit is important. Computer - The necessity of computer is important to start the working of E-governance. In computer there is hardware and software. Internet - The work of E-governance has been done by internet. Software - There is an interaction and illustration of information by the medium of software for various kinds of works. Website - There should be an independent website for each office. An important information is to be taken from website. We can send an information through E-mail. Citizen / Consumer - The work can not be done without the help of the citizen so citizens should participate in it to interact information from each other

Features of E-governance

Paperless work - The main feature of E-governance is that there is not the use of paper means paperless work is there. **Signal Window many work** - The availability of all services or information at one place and time. We called it one window system. **Transparency** - The work in E-Governance is Transparent and accurate. **Anytime service** - E-governance

is to be worked anytime **Immediate Service** - Immediate service is to be given from E-Governance. It provides speedily service. **Electronic Process** - In E-governance the collection of information and its illustration is to be done by Electronic medium

Benefits of E Governance - It is money and time saving, immediate and well worth connected, Transparency & become less and from E-governance, it maintains the speed in governance and enhancing its working capacity. The governance become modern and it has shape also, The geographical difference become decrease, It is beneficial for underdeveloped country.

Problems before The E-governance Incompletion of basic needs, lack of information technology, lack of well-trained workers, Missuse of computer and internet, It is impossible to do paperless work, Nervousness for the service of E-Governance, Instrunant of technology is costely, Negligence to the needs of citizens, criminal activities in cyber.
